Produce of drinking water by One Wind Power Generator

From Year 2014 three models of Seawater Desalination System has been introduced and began selling

The success secret is can obtain drinking water by the power of only one small wind power generator

Achieved further differentiation from the competitors

To make drinking water from sea water, Water treatment plant needs enormous amount of electric power. Therefore, there is power shortage in conventional wind power generation system. By reviewing the power system and new technological innovation has given such as a significant improvement of the desalination equipment, made the best feature of the Company's small wind power generator can be able to generate power from very low wind speed and operate the generator is to device all the time by wind power. This device is successful because It can produce enough drinking water with a very small amount of electric power where drinking water is not available.

Water treatment device can produce the drinking water of 200L from seawater a day but In the place of no available drinking water by installing one small wind turbine and compact size water treatment device it is possible to produce drinking water during any time of 24 hours.

In Addition, We have developed a new model for producing drinking water from sea water 300L/h (up to 4,500L per day)! Further strengthen the manufacturing plant will established in Indonesia, increased the number of local staff and in future this water treatment plant will have the explosive demand.

※Indonesia, Lombok Island, pilot device (manufacturing the drinking water of 3,000L per day)

Contemporary In the world the model of by using small wind turbine electric power water desalination system is not existed before. This system has a demand in different countries, Pacific Ocean island countries as well as Japan.

Those who has already inquired and will have inquiries of certain projects in order. We will start the delivery from December.

In a very a low price, please stay tuned to the high-quality products!
